3.3 Other observations _____

4. Squat

4.1 Squats fully and rises without difficulty Yes No

Comments _____

RANGE OF MOTION CERTIFICATION

Thoracolumbar motion testing is valid if the following four criteria are achieved. Please certify the status of the examinee on each of these four criteria:

The back injury is now stable.

Yes No

The motions were not curtailed due to a report of pain, fear of injury, or neuromuscular inhibition.

Yes No

Three consecutive measurements of each motion were within 5° (within 10° if the three averaged 50° or more).

Yes No

Examinee passed validity test.

Yes No

Physician signature _____

15. Other tests and findings

16. Clinical impression of somatic amplification

Check

Score

Sensory examination: response to pinprick

- 16.1 No deficit or deficit well localized to dermatome(s) 0
- Deficit related to dermatome(s) but some inconsistency 1
- Nondermatomal or very inconsistent deficit 2
- Blatantly impossible (i.e., split down midline of entire body with positive tuning fork test) 3
- 16.2 Amount of body involved <15% 0 15-35% 1 36-60% 2 >60% 3

Motor examinations

- 16.3 No deficit or deficit well localized to myotome(s) 0
- Deficit related to myotome(s) but some inconsistency 1
- Nonmyotomal or very inconsistent weakness, exhibits cogwheeling or giving away, weakness is coachable 2
- Blatantly impossible, significant weakness which disappears when distracted 3
- 16.4 Amount of body involved <15% 0 15-35% 1 36-60% 2 >60% 3

Tenderness

- 16.5 No tenderness or tenderness localized to anatomically sensible structure 0
- Tenderness not well localized, some inconsistency 1
- Diffuse or inconsistent tenderness, multiple structures (skin, muscle, bone, etc.) 2
- Impossible, significant tenderness of multiple structures (skin, muscle, bone, etc.) which disappears when distracted 3
- 16.6 Amount of body involved <15% 0 15-35% 1 36-60% 2 >60% 3

Differential straight leg raising (SLR)

16.7 The difference between SLR tests performed in the supine and sitting positions (the patient is distracted in the sitting position by examining the bottom of his/her feet). Example: supine SLR positive at 10°, seated SLR positive 50°, difference = 40°

- Difference <20° 0 20-45° 1 >45° 2
- No pain seated, but strongly positive SLR when supine at less than 45° 3

Findings (attach report if available):

Patient position during x-ray Recumbent Weight bearing Unknown

19. Clinical diagnosis

(Please indicate appropriate diagnosis codes and give written description. If appropriate, multiple diagnoses can be designated.)

Soft tissue

- Lumbar sprain/strain (847.2)
- Lumbosacral sprain/strain (846.0)
- Sacroiliac sprain/strain (846.1)

Disc

Lumbar disc displacement without:

- Myelopathy (with or without radiculitis) (722.10)
- Lumbosacral radiculitis (724.4)

Other

Posterior joints

- Facet syndrome (724.8)
- Lumbar subluxation (839.20) or segmented dysfunction (739.3) (circle)

Sacroiliac

- Sacroiliitis (720.2)
- Sacroiliac subluxation (839.42) or segmental dysfunction (739.4) (circle)
